Introducing the Tunnel Logic™ Controller by Auto Data.

From day one, the Tunnel Logic controller was created with the latest car wash equipment and tunnel configurations in mind. Since we started with a clean slate we were not anchored to old software we had written or by old hardware already in the field. This allowed us to target some of the hottest trends in the car wash industry such as the Express concept.

It's all built in...and built for the future.
It all starts with the latest PLC from Schneider Electric. PLC's have certainly been around awhile but they have only recently become powerful enough to handle the demands of today's car wash equipment. Whether you need to integrate gate control, auto cashiers, or full point-of-sale, Tunnel Logic can handle it. With integrated network connectivity and virtually unlimited expandability, Tunnel Logic is built for the future.

Get the most out of your tunnel equipment.
PLC's have always been known for reliability, but they were never very easy to program, until now. Auto Data has created a truly easy-to-use, Windows® based setup program that talks directly to the PLC. What makes the setup so easy is the graphics. Simply point and click to enter settings, add, delete, or change wash functions, packages, pricing...all without digging through a manual or calling for help. You'll get the most out of your tunnel equipment because you now have the control.
It's all built in.

**Controller Features**
- 32, 48 or 64 functions with unlimited expandability
- Does not depend on computer for operation
- Completely programmable via any Windows® computer
- Includes easy-to-use setup software
- Fully integrates with Auto Data’s software for full point-of-sale and detailed reporting
- Seamless integration and 2-way communication with Hamilton HTK and Gold Line Auto Cashiers
- Access via the internet to change prices, set up new wash packages (functions), or view reports
- Simulated pulse and look ahead functions
- Built-in anti-collision controls
- Set up new functions without tunnel interruption
- Includes 1 panel mounted E-Stop and 2 externals wired separately from PLC
- 64 car stack control
- Optional integrated gate control with sequencing
- Roller controls with configurable dolly up patterns
- Pulse meter input with calibration routine for “to the inch” accuracy
- Industrial ethernet switch for network connections from controller to tunnel entry to POS
- Cat 5 network connectivity or 4 wire compatibility
- Easy to swap integrated mechanical relays
- Industry proven, “off the shelf” components from Schneider Electric

**Touch Button Station Features**
- Industrial strength and water resistant
- Build and initiate wash packages with add-ons
- Choose over-rides and adjust the wash queue
- Check sales stats
- Monitor and control inputs and outputs
- Password protected auto/on/off for all outputs
- Change language to Spanish or French with one touch
- Change screen buttons easily, No stickers required
- Control and test gate operation
- Wet down and prep gun(s) support
- All screens web accessible for remote monitoring

- Built in reliability.
- Built in expandability.
- Built in value.

Since 1984
Push Button Station Touch Screen at Tunnel Entry
(Screen Shots)

Main Menu
Multi-language support with the touch of a button

Easily check sales on-site or remotely via the web. All screens and functions are web enabled for remote access and control.
Monitor Outputs for diagnostics or enter password protected test mode. Testing can be done with tunnel equipment in plain view.

Launch washes with different addons and equipment over-rides.

64 Car Stack included. Easily reorder your wash sequence when something out of the ordinary happens.
For Car Washes with gated entry, gate control is built in to the same PLC, adding value and reliability. Gates can be monitored and controlled from the front of tunnel entrance right at the touch screen for convenience and hassle free operation.

Pos-i-Wash
Get the power you need to run your wash more efficiently with Pos-i-Wash, Auto Data's Windows based point-of-sale forged from the tried and true point-of-sale technology it has been perfecting for over 23 years. Because we were able to leverage so much of our existing POS technology, we are proud to offer Pos-i-Wash for only $499 along with an affordable software update & support plan. Complete with time clock, powerful reporting, cash drawer and inventory control, Pos-i-Wash is the first truly affordable POS solution for the car wash industry. While it may not initially have every feature you desire, Pos-i-Wash will be aggressively developed to meet the needs of its users. With valuable input from our customers, we will strive to make Pos-i-Wash the most reliable, intuitive, and best supported software solution in the industry.

Easy to Learn, Easy to Use
The secret to Pos-i-Wash's speed and ease-of-use is its one-screen functionality at the point-of-sale combined with Touch Screen support. The pull-down menus and intuitive design keep you from getting lost or tangled up in the system. The last thing you need, when trying to impress your customer is to be scratching your head trying to figure out how to cash something out on the computer. No one can rival the interface we have developed. With as little as just an hour of training you and your employees can be cashing out customers with speed and confidence!

Inventory Control for Your Lobby
Know where you stand with real time inventory control and reporting. Manage services, coupons, pricing and costs, add and delete part numbers, implement packages and promotions, track new shipments and make inventory adjustments. It's all quick and easy, and unlike our competitors, our adaptive automatic parts reordering is based on actual sales instead of static reorder levels so you'll never have too little stock on hand...or too much.

Powerful Sales Reports
Powerful, flexible, timely sales and inventory reports give you the status of your operation at all times, helping you make better business decisions.
More Features

- **Touch Screen**
  Transactions are now faster and easier than ever with an available Touch Screen interface.

- **Solid State CPUs**
  Pos-i-Wash runs on Windows. You can provide your own hardware, or use our solid state PC, which protects your system against hard drive failures that plague weaker computers. The solid state PC uses Windows XPe, an embedded version of Windows that locks down the system, protecting you from viruses and unauthorized downloads.

- **Tunnel Logic Controller Interface**
  Prevent unauthorized washes and keep tabs on your tunnel activity with two-way ethernet communications between Pos-i-Wash and Tunnel Logic. Unlike many of our competitors, we do not charge you extra to interface to our own tunnel controller. It comes standard.

- **Retail Bar Code Scanner**
  Pos-i-Wash comes with built in support to scan Lobby items for ultra-quick and error free transactions.

- **House/Fleet Account Management**
  Set up individualized fleet account rules, so customized pop-up windows appear in the point-of-sale. This forces your cashiers to process fleet transactions properly, ensuring prompt payment and saving you time and headaches.

- **Thermal Car Wash Receipt Printer**
  Fast, professional receipt printing that is affordable to operate and easy to maintain.

- **Share Customer Data**
  Your customers' wash history is automatically shared between all your stores with AutoPoll.NET.

- **Integrated Time Clock**
  Track employee punch-in and punch-out times from your point of sale. Daily time reports can be printed as well as historical reports for any date range.

- **Converting to Pos-i-Wash is easy!**
  If you already have a system and are considering a switch, we can convert records in your existing customer database to the Pos-i-Wash system. Your data will stay intact making your transition to Pos-i-Wash easier than ever.

- **Enterprise Control Manager** (Add On Option)
  If you're operating multiple locations, you can integrate Pos-i-Wash with Enterprise Control Manager, which puts accounting, sales, and inventory management where they should be—your back office. Your back office staff manages data so your shop employees can stay focused on your customers and their vehicles.

- **QuickBooks Integration** (Add On Option)
  QBLink is Auto Data's optional one of a kind one-click interface to QuickBooks Pro® accounting software. This is hands down the easiest and most powerful way to transfer your General Ledger and Accounts Receivable data from POS-Wash into QuickBooks Pro without a keystroke. Click one button and you are done.

- **Credit Card Clearing** (Add On Option)
  Utilizing your high speed internet connection you will be processing credit card transactions in 2-3 seconds. This indispensable option will eliminate errors while speeding up your service at the same time. Supports our optional debit key pad so you can save on transaction fees while offering more flexibility to your customers.
CCTi - Credit Card Terminal Interface

Introducing the next generation Auto Data credit card processing solution—CCTi. This new solution is PCI compliant and accomplishes the main goals of speeding up transactions, increasing accuracy and reducing costs, while adding the ability to process Voyager & Wright Express Fleet Cards. This new methodology also helps you achieve PCI compliance easier by processing payments without sending customer account data through the Auto Data POS software. This is accomplished by interfacing to Verifone’s PCI compliant Electronic Cash Register Interface software preinstalled on your terminal by your processor.

CCTi operates independently of your Auto Data system and is capable of switching over to telephone lines during Internet connectivity loss, providing unparalleled reliability to its users.

This solution reduces transaction fees, avoids needing multiple PCI compliant devices, and the payment processor maintains the updates to the payment equipment.

- Fast—processes cards in a second
- Reliable & Redundant
- Accurate—Amount of transaction entered automatically by Posilube
- Automatically determines which credit card is being charged
- Affordable—Only $1,295
- Processes Fleet Cards (Voyager & Wright Express)
- Built in Debit Keypad

AUTO DATA
BUILT FOR THE FUTURE

800 767 7580 www.autodatainc.com
Complete Express Wash Control.

Affordable & Reliable because a computer isn’t required.

It’s all built in.

800.767.7580
www.autodatainc.com
Auto Data's Exterior Wash package starts with Tunnel Logic. Rock solid performance is delivered thanks to the latest PLC technology and Auto Data design. Nothing is more reliable than a PLC, and now, no controller is easier to program, thanks to its simple Windows® based software.

Forget about old push button boxes and step into the 21st century with our unique Touch Screen Entry Station. It changes languages with one touch and automatically updates as you add or change wash packages.

Our Exterior Package also includes our POS software featuring handheld technology, fast touch screen check out, and full sales and tunnel reporting.

**EXTERIOR ONLY PACKAGE**

$29,620

**OPTIONS**

- Upgrade to 48 I/O
- $1,500

- Tunnel Scanner (wireless version)
- $995
- QBliness QuickBooks Interface
- $1,495
- AutoPoll.NET Web Reporting
- $295

800.767.7580  www.autodatainc.com
Auto Data began development on its revolutionary new Tunnel Logic Controller back in 2007.

As we developed it, we recognized that the growing Express Wash market had unique needs that were not being met by the older technology available.

With the Express Wash concept in mind, we created a state of the art PLC based controller made unique by its easy to program Windows® interface, touch screen entry station, and purpose built Cash Tracker software designed specifically for the Express Wash.

The end result is a cutting edge solution delivered at a price that is typically 20% less than the competition.

**TWO-LANE SYSTEM INCLUDES:**

- CASHTRACKER SOFTWARE
- 64 I/O TUNNEL LOGIC WITH GATE CONTROL
- TOUCH SCREEN ENTRY STATION
- 2 HTK AUTO CASHIERS
- 2 ENTRY GATES
- MANAGER'S COMPUTER
- ONSITE TRAINING

**OPTIONS**

- Upgrade to 80 I/O: $2,000
- Upgrade to 96 I/O: $4,000
- Upgrade to 128 I/O: $8,000

Intuitive Point-of-Sale Functionality and Flexibility at the Car Wash

By Tom Noble

A new tunnel controller has its origins in a point-of-sale system for the quick-lube industry that has been around for nearly a quarter century. The POS system was developed by a software expert who also was a onetime quick-lube center owner, and was continually enhanced during the intervening years through a strategy of embracing new technologies and innovation.

The decision to expand the system’s reach into the car wash market, brought new challenges. Many car wash operators wanted the tunnel controller tied into the software so they could compare the activity between the POS system and the number of car washes the controller performed, alleviating theft concerns. Furthermore, research suggested that a more intuitive, longer-life controller was possible, one that would also have the capability of being retrofitted to existing tunnels whose owners were looking to upgrade.

**COMPONENT MIX**

It is important to today’s car wash owners to reduce manpower as much as possible, closely monitor chemical usage, reduce downtime, and keep tabs on their operation 24/7. Recognizing these and other demands in the car wash industry, the challenge was to develop a solution that offered things like Internet access, after-market service, and an easy and convenient operator interface. The first selection: a flexible, powerful, Ethernet-capable, Programmable Logic Controller (PLC) enhanced with a line of development software that features various IEC (International Electrotechnical Commission standard-compliant) programming languages. Next came a reliable human machine interface (HMI). Most importantly, the hardware components were commercial, off-the-shelf items, making them easily supportable and readily available. The resulting tunnel controller was an easy-to-use, Windows®-programmable PLC that anyone can operate.

"Many in the car wash industry don’t know what a PLC is," said Craig Harris, national sales manager for Atlanta, GA-based Auto Data, “And those who do typically run into the PLC’s stereotype of not being powerful enough or too difficult to program.” Keeping this in mind, the tunnel controller was designed for non-engineers by utilizing intuitive icon-based graphics. Using a Windows-based PC, the user can easily add new functions or change the way the controller operates. Essentially, any car wash operator can program the PLC via a proprietary Windows interface.

The HMI is placed at the front of the tunnel to initiate the wash, handle the stack/sequence of vehicles, see sales statistics, and monitor and operate individual input and output functions in the tunnel. This complements the graphical user interface and effectively replaces the traditional pushbutton or mem-
brane-based keypad typically found in older systems. Because the HMI is directly connected to the PLC via a standard Ethernet connection, it is easily changed and monitored from any Internet-ready computer utilizing proprietary software. Since the tunnel entry station is software based, there is no limitation to the number of buttons that can be added, and changes made to the controller and items sold are reflected immediately. In a traditional car wash system, these changes wouldn’t be possible without physically relabeling pushbuttons — adding buttons is not typically an option at all.

Older car wash PLCs rely on a 16-key keypad and a crude LCD display, forcing operators to be very experienced in order to program the PLC. “Think of programming your VCR, only worse,” said Harris. “The tunnel controller is more like a DVR, with intuitive, easy-to-use controls that makes VCR programming seem extraneous and inconvenient.”

The tunnel controller is not reliant on a traditional computer, unlike other solutions on the market. Various hybrid control systems, which use Windows or DOS-based software along with a printed circuit board controller containing a microprocessor, exist but are very difficult to program and are not as reliable due to the fragile circuit board.

**LONGEVITY**

The system is built with the future in mind, but without rendering existing car wash motor control panels obsolete. The PLC has the power and longevity required by the car washes of today and tomorrow. It can be used to provide gate control, auto cashier integration, and full point-of-sale software with network connectivity and virtually unlimited expandability. In addition, the tunnel controller can be retrofitted to older car washes. The programming software ensures that the tunnel controller can be continually enhanced for possibly the next 25 or more years.

**GATE CONTROL**

It was important to be able to tie the gate control into the system. Some companies utilize a separate controller or a standard PC for this application, but the PC can present operating system issues, viruses, and failing hard drives. Plus, it adds extra cost to the overall solution. With the tunnel controller, gate control can be built right into the original controller, which adds better performance while saving the operator money. After customers pay for their wash and the gate opens, the purchase instantaneously is transmitted to the HMI along with information such as which car wash package was purchased. In addition, the integrated gate control logic ensures the vehicle queue order is properly maintained.

**INTERNET-READY**

Having both Internet and Ethernet capabilities is a vital service to operators. Cat 5 Ethernet is relatively inexpensive to wire, so the system provides a robust form of communication at an affordable price. Since the HMI is Ethernet ready and web-enabled, it provides remote connection to the controller, allowing for off-site monitoring by operators and the vendor’s technical support system and live staff. These online capabilities provide car wash owners the fast-paced communication they need in today’s technologically advanced market place.

Tom Noble is market segment manager, transportation wash, for Schneider Electric and specializes in motor-control products. Tom has an MBA in Global Management from the University of Phoenix and is a graduate of Lawrence Technological University. You can reach Tom via e-mail at t.noble@us.schneider-electric.com.

**LIMOUSINES:**
As a business owner what is most important to you? Is it your customer’s Convenience? The Security of the machine? Or, more Marketing capabilities? Now Hamilton offers you all three in one machine, the HTK.

**Convenience**

WITH AN ARRAY OF PAYMENT & DISPENSING OPTIONS

- Cash & Coins
- Tokens
- Dual Bill Dispenser
- Credit Card Acceptance
- Paypass

- Hamilton Tokenotes®
- Customer Value Cards
- Coupon Codes
- Fleet Codes
For the business owners’ convenience: The HTK offers access via the Internet to view and print audit reports, clear soft errors, change prices and display messages.

The credit card Paypass offers even faster through put at your business. The customer simply taps their credit card on the Paypass for a 3 to 4 second approval.

The HTK comes with a dual head credit card reader. This allows a credit card to be swiped in either direction, making the transaction easier for the customer.

The Dual Bill Dispenser gives the HTK the ability to dispense two different bill denominations or bills and Tokenotes®.

Dual hoppers in the HTK allow more change dispensing options. Dispense quarters, dimes, nickels, tokens or a combination of two different coin types. Dispense a Bonus Token for a free product along with change in bills or coins. Price your selections to the nickel, for example, $12.95.

The coin acceptor in the HTK can accept six different coin types. The coins are collected in a coin box and do not replenish the coin hoppers.

If your place of business is located in an area with diverse languages, the HTK has bi-lingual capabilities. For example, it can be programmed with English and Spanish or English and French languages.

Loyal customers who have purchased Customer Value Cards can now go to the HTK to add value/recharge their cards.

Self-serve bay customers can obtain a receipt for their credit card transactions at the HTK.

The HTK comes with a communication call button. This can be wired to a system in an equipment room or office making it easier for customers to communicate any questions.

For the business owners’ convenience: The HTK offers access via the Internet to view and print audit reports, clear soft errors, change prices and display messages.

The SmartXE Validator has serial communications and talks directly to the HTK controller. The benefit to the business owner is the elimination of training coupons for programming the Hamilton Tokenotes®. The Tokenote® codes are programmed in the controller and the SmartXE will accept them. If a customer tries to insert additional Tokenotes® for the same transaction, the SmartXE will no longer confiscate them. The Tokenote® will be returned to the customer for their next visit.
With the added security features, the HTK offers more peace of mind.

**High Security Door**
- Separate locked cash chamber
- Password Required/Protected

**E-mail or Text Notifications**
- Heavy Duty Exterior & Interior Locks
- Security Camera

The HTK comes equipped with an alarm to deter tampering.

The door to the HTK is password protected. Owners may program the machine with exclusive usernames and passwords to give rights to enter the machine. If someone gains access to the machine without first inputting their password the alarm will sound. The HTK is capable of sending either an e-mail or text message notification of tampering.

With password protection the HTK is capable of giving a time stamped report that will show when and by whom the machine is accessed.

The HTK comes standard with heavy duty interior & exterior locks. The exterior door has two heavy duty Medeco® locks. The interior of the machine has a separate locking cash/coin chamber with a Medeco® lock.

With the cash and coins locked in an individual chamber you may have the interior lock keyed differently from the exterior locks. This will allow maintenance of the machine while keeping cash and coins secure, giving added peace of mind.

The new micro security camera is inconspicuous to the customer while giving you full view of anyone at the machine. It can be connected to a security system that is already in place or one that is added at a later date.
The brilliant display on the HTK is ideal for promoting other areas of your business.

**Innovation**

PUT THE HTK TO WORK FOR YOU. THE CONTEMPORARY GRAPHIC DISPLAY OFFERS THE ABILITY TO INCREASE CUSTOMER LOYALTY, PROMOTE DIFFERENT AREAS OF YOUR BUSINESS AND CROSS ADVERTISE WITH BUSINESSES AND CHARITABLE ORGANIZATIONS IN THE AREA.

Customer Value Cards/Tokenotes®

The brilliant display on the HTK is ideal for promoting other areas of your business. Take advantage of a variety of marketing & advertising opportunities with the ability to download still photos, promotional messages, video, and your own custom graphics to the machine. Cross promotions with a neighboring business or an area charity can be as easy as a download to the HTK.

Customer Value Cards and Tokenotes® are an excellent way to create customer loyalty. The Value Cards can be used either as a fleet card or prepaid gift card. If you are using them as gift cards, they are rechargeable at the HTK. Tokenotes® are a paper coupon and can be used for a discounted or free service. Tokenotes® can be dispensed at the HTK in place of or with cash back after a service has been purchased. The HTK graphic display is an excellent way to let your customers know that you have Tokenotes® and Customer Value Cards available.

The HTK can be programmed with an unlimited number of Coupon Codes. The customer enters the code at the HTK and receives a discounted or free service that has been programmed to match that code. Advertising codes in a local newspaper, on a flyer, or your website for a specific service will help attract new customers to your location.

If there are special events in the area, event times and pricing can be programmed into the HTK. The HTK allows you to program up to seven time sensitive pricing events. This feature gives the HTK the ability to automatically change the prices, coupon values, welcome prompts, and external display messages based on the time of day and day of the week.
Technical Specifications
